4. A summer learning activity/task

One aspect of A level PE that you will study in the first term is movement analysis

Movement analysis involves an understanding of the skeletal and muscular system and how they work together to provide movement in sport. For example, the movement analysis involved in kicking a football or tennis serve.

You will be required to answer a movement analysis question in your exam. This question will require the following information....

Task 1: Joint Types and Articulating Bones

To allow you to gradually build up your knowledge there are **four tasks** that build on one another. Whilst there is repetition between tasks, this is deliberate and aims to reinforce some learning through repetition.

For task 1, you have to identify the **synovial joint type** and **articulating bones** in a series of common joints found in the body.

Key Terms

A **synovial joint** is a joint that allows a wide range of movement and which is composed of two or more bones which exist in a joint capsule.

Articulating bones are bones that move against one another within a joint.

Complete the table below

| Joint | Joint type | Articulating bones |
|----------|------------|--------------------|
| Elbow | | |
| Knee | | |
| Ankle | | |
| Shoulder | | |
| Нір | | |
| Wrist | | |

Task 2: Adding joint movements

There are a series of possible movements that can occur at joints. These vary from joint to joint based on the **type** of joint, the **shape** of the joint and the **connective tissues around the joint** (ligaments, tendons & muscles). The most common joint movements are identified below.

Define each joint movement.

| Joint movement | Definition |
|----------------------|------------|
| Flexion | |
| Extension | |
| Abduction | |
| Adduction | |
| Dorsiflexion | |
| Plantar flexion | |
| Rotation | |
| Horizontal abduction | |
| Horizontal adduction | |

Now add possible joint movements (**only from the above list**) to the table below. The number of spaces in the final column indicates the number of joint movements possible at the named joint.

| Joint | Joint type | Articulating bones | Joint movements | |
|----------|------------|--------------------|-----------------|----|
| Elbow | | | | |
| | | | | |
| | | | | |
| Knee | | | | |
| | | | | |
| Ankle | | | | |
| AIIKIC | | | | |
| | | | | |
| Shoulder | | | 1. | 5. |
| | | | 2. | 6 |
| | | | 3. | 7. |
| | | | 4. | _ |
| Нір | | | 1. | 4. |
| | | | 2. | 4. |
| | | | | _ |
| | | | 3. | |
| Wrist | | | | |
| | | | | |
| | | | | |

Task 3: This involves adding the agonist muscle (Print this task after completing)

The first two sections that you have completed will give you an insight into A level PE and you will use that knowledge to complete tasks 3 and 4

Student name: ____

Complete the table below by finding the **agonist** muscle. The muscle that causes the joint movement

| Joint | Joint type | Articulating bones | Joint movement | Agonist muscle(s) |
|----------|------------|--------------------|----------------------|------------------------------------|
| Elbow | | | | |
| Knee | | | | |
| Ankle | | | | |
| Shoulder | | | | |
| | | | Horizontal adduction | |
| Нір | | | Rotation | Subscapularis/infraspinatus |
| | | | | |
| | | | Rotation | Gluteus medius/ Gluteus maximus |
| Wrist | | | | |

Task 4: Applying theory to practice (Print this task after completing)

Well done if you have got this far! The final task involves taking what you have learnt and applying it to a series of sporting pictures to test your application of knowledge.

Example: in the upward phase of a bench press the table would be as below:-

Upward phase of bench press

| Joint | Joint Type | Articulating bones | Joint movement | Agonist | Muscle contraction type |
|----------|---------------|---------------------------|----------------------|--|-------------------------------|
| Elbow | Hinge | Humerus, radius & ulna | Extension | Triceps brachii | Concentric |
| Shoulder | Ball & socket | Scapula and humerus | Horizontal adduction | Pectoralis major & anterior deltoid | Concentric |

The Vertical Jump. Complete the box below based on what is shown in the picture

| Joint | Ankle | Knee | Hip |
|----------------------------|-------|------|-----|
| Joint type | | | |
| Articulating bones | | | |
| Joint movement | | | |
| Agonist | | | |
| Muscle contraction type | | | |

Biceps Curl- Upward phase. (Picture B) Complete the box below based on what is shown in the picture

| Joint | t | Joint type | Articulating bones | Joint movement | Agonist | Muscle contraction type |
|-------|---|------------|--------------------|-------------------|---------|-------------------------------|
| | | | | | | |

Well done on completing the summer work
